

“JP Practical 3: Write a program in Java to demonstrate command line arguments”

A] Code:

```
package command.line.apps;

public class C_CommandLineArgs {
    public static void main(String[] args) {
        // Check if command line arguments are provided
        if (args.length == 0) {
            System.out.println("No command line arguments provided.");
        } else {
            // Display the provided command line arguments
            System.out.println("Command line arguments:");
            for (int i = 0; i < args.length; i++) {
                System.out.println("Argument " + (i + 1) + ": " + args[i]);
            }
        }
    }
}
```

B] O/P:

a] Without args:

```
No command line arguments provided.
```

b] With args:

```
Command line arguments:
Argument 1: command
Argument 2: line
Argument 3: args
Argument 4: in
Argument 5: java
```
